PATENT  
P56921CLAIM LISTINGS

Pursuant to 37 CFR §1.121(c), this listing of the claims, including the text of the claims, will serve to replace all prior versions of the claims, in the application.

Please amend claims 1, 5-7, 9-14, 16-19, 21-23, 27-28, and 31, and cancel claims 4, 8, 15 and 20 without prejudice or disclaimer as follows:

1. (Currently Amended) A terminal registration method using a session initiation protocol, comprising:

transmitting a media access control address to a session initiation protocol server by a terminal in a voice over Internet protocol system including the terminal and the session initiation protocol server;

retrieving a database comprising terminal information ~~[[of]]~~ for the terminal in accordance with the media access control address, and transmitting to the terminal, from the session initiation protocol server receiving the media access control address from the terminal, the terminal information ~~[[of]]~~ for the terminal ~~corresponding to~~ in accordance with the received media access control address ~~to the terminal by the session initiation protocol server receiving the media access control address from the terminal;~~

transmitting to the session initiation protocol server, from the terminal, a register message including the obtained terminal information and ~~designating~~ including a first predetermined value assigned~~[[with]]~~ to a field value of a telephone number field ~~to the session initiation protocol server by the terminal;~~

retrieving the database, and transmitting to the terminal, from the session initiation protocol sever receiving from the terminal, the register message including the terminal information and

PATENT  
P56921

18 including the first predetermined value assigned to the field value of the telephone number field, a  
19 second field value of the telephone number field and [[a]] user registration information in accordance  
20 with the terminal information received from the terminal to the terminal by the session initiation  
21 protocol server receiving the register message including the terminal information and designating the  
22 first predetermined value with the field value of the telephone number field from the terminal;

23 requesting, at the terminal, the session initiation protocol server to perform registration by  
24 using the received user registration information received by the terminal; [[and]]

25 performing the registration of the terminal, and transmitting to the terminal, from the session  
26 initiation protocol server receiving, from the terminal, a registration request signal including the user  
27 registration information, a registration success message to the terminal by the session initiation  
28 protocol server receiving a registration request signal including the user registration information  
29 from the terminal; and

30 the steps of retrieving the database, and transmitting the user registration information further  
31 comprising the sub-steps of:

32 parsing the register message, and requesting a location server,  
33 at the session initiation protocol server receiving, from the terminal,  
34 the register message including the terminal information and including  
35 the first predetermined value, to transmit the user registration  
36 information in accordance with the terminal information;

37 retrieving the database, and transmitting to the session  
38 initiation protocol server, at the location server requested by the  
39 session initiation protocol server to transmit the user registration  
40 information, the user registration information in accordance with the

PATENT  
P56921

41 terminal information; and

42 transmitting to the terminal, from the session initiation

43 protocol server receiving, from the location server, the user

44 registration information, the received user registration information.

1 2. (Original) The method of claim 1, wherein the terminal information includes Internet  
2 protocol address, Subnet, and domain name server information of the terminal.

3. (Canceled)

1 4. (Canceled)

1 5. (Currently Amended) The method of claim 1, wherein with the first predetermined value  
2 transmitted to the session initiation protocol server from the terminal in the step of transmitting the  
3 register message [[is]] being a predetermined unused telephone number unused by users.

1 6. (Currently Amended) The method of claim 1, ~~wherein the step of~~ during the transmission  
2 of transmitting the media access control address from the terminal to the session initiation protocol  
3 server ~~from the terminal of the step of transmitting the media access control address,~~ the media  
4 access control address [[is]] being transmitted by using a broadcasting method.

1 7. (Currently Amended) The method of claim 1, wherein the step of retrieving the database,  
2 and transmitting terminal information [[of]] for the terminal comprises the sub-steps of:

PATENT  
P56921

3        transmitting to the location server, from the session initiation protocol server receiving the  
4        media access control address from the terminal, the received media access control address to the  
5        location server by the proxy server receiving the media access control address from the terminal;  
6        retrieving the database, and transmitting to the session initiation protocol server, from the  
7        location server receiving the media access control address from the session initiation protocol server,  
8        the terminal information in accordance with the received media access control address to the proxy  
9        server by the location server receiving the media access control address from the proxy server; and  
10        transmitting to the terminal, from the session initiation protocol server receiving the terminal  
11        information from the location server, the received terminal information to the terminal by the proxy  
12        server receiving the terminal information from the location server.

1        8. (Canceled)

1        9. (Currently Amended) The method of claim [[8]] 1, wherein with a message used to  
2        transmit the user registration information to the terminal from the proxy server [[is]] being "401  
3        Error Message".

1        10. (Currently Amended) The method of claim [[8]] 1, wherein with a message used to  
2        transmit carry the user registration information to the terminal from the [[proxy]] session initiation  
3        protocol server to the terminal [[is]] being an error message.

1        11. (Currently Amended) The method of claim 1, wherein the step of performing the  
2        registration of the terminal, and transmitting [[a]] the registration success message comprises the

PATENT  
P56921

3 sub-steps of:

4 transmitting ~~a received registration message~~ to the location server, ~~[[by]]~~ from the ~~[[proxy]]~~  
5 session initiation protocol server receiving, from the terminal, ~~[[the]]~~ a registration message  
6 including the user registration information ~~from the terminal~~, the received registration message;  
7 comparatively analyzing the registration message by parsing the registration message,  
8 performing registration ~~[[if]]~~ when the registration message is successful, and transmitting to the  
9 session initiation protocol server, from the location server, a success message ~~to the proxy server by~~  
10 ~~the location server~~; and

11 transmitting the received success message from the session initiation protocol server to the  
12 terminal ~~by the proxy server~~.

1 12. (Currently Amended) The method of claim 1, wherein a request message includes  
2 comprises at least a sequence number, an identification, and an media access control address; and  
3 a response message includes comprises at least a sequence number, an identification, and a  
4 reason.

1 13. (Currently Amended) A computer-readable medium having computer-executable  
2 instructions for performing a method, the method comprising:  
3 transmitting a first address from a terminal to a session initiation protocol server ~~by a~~  
4 terminal;  
5 retrieving a database containing terminal information for the terminal in accordance with the  
6 first address, and transmitting the terminal information ~~[[of]]~~ for the terminal ~~corresponding to the~~  
7 ~~received in accordance with the first address to the terminal~~ received by the session initiation

PATENT  
P56921

8 ~~protocol server receiving the first address from the terminal by retrieving a database containing~~  
9 ~~terminal information of the terminal in accordance with the media access control address;~~

10 transmitting to the session initiation protocol server, from the terminal, a register message  
11 including the obtained terminal information and designating including a first predetermined value  
12 [[with]] assigned to a field value of a telephone number field to the session initiation protocol server  
13 by the terminal;

14 transmitting to the terminal, from the session initiation protocol sever receiving, from the  
15 terminal, the register message including the terminal information and including the first  
16 predetermined value assigned to the field value of the telephone number field, a second  
17 predetermined value of the telephone number field and user registration information in accordance  
18 with the terminal information received from the terminal to the terminal by the session initiation  
19 protocol sever receiving the register message including the terminal information and designating the  
20 first predetermined value with the field value of the telephone number field from the terminal;

21 requesting, at the terminal, the session initiation protocol server to perform registration by  
22 using the received user registration information received by the terminal; [[and]]

23 performing the registration of the terminal, and transmitting to the terminal, from the session  
24 initiation protocol server receiving, from the terminal, a registration request signal including the user  
25 registration information, a registration success message to the terminal by the session initiation  
26 protocol server receiving a registration request signal including the user registration information  
27 from the terminal; and

28 the steps of retrieving the database, and transmitting the user registration information further  
29 comprising the sub-steps of:

30 parsing the register message, and requesting a location server,

PATENT  
P56921

31 at the session initiation protocol server receiving, from the terminal,  
32 the register message including the terminal information and including  
33 the first predetermined value, to transmit the user registration  
34 information in accordance with the terminal information;

35 retrieving the database, and transmitting to the session  
36 initiation protocol server, at the location server requested by the  
37 session initiation protocol server to transmit the user registration  
38 information, the user registration information in accordance with the  
39 terminal information; and

40 transmitting to the terminal, from the session initiation  
41 protocol server receiving, from the location server, the user  
42 registration information, the received user registration information.

1 14. (Currently Amended) The computer-readable medium having computer-executable  
2 instructions for performing the method of claim 13, wherein the step of retrieving the database, and  
3 transmitting terminal information of the terminal comprises the sub-steps of:

4 transmitting the received first address to the location server, [[by]] from the [[proxy]] session  
5 initiation protocol server receiving the first address from the terminal, the received first address;

6 retrieving the database, and transmitting to the session initiation protocol server, from the  
7 location server receiving the first address from the session initiation protocol server, the terminal  
8 information in accordance with the received first address to the proxy server by the location server  
9 receiving the first address from the proxy server; and

10 transmitting the received terminal information to the terminal, from [[by]] the [[proxy]]

PATENT  
P56921

11 session initiation protocol server receiving the terminal information from the location server, the  
12 received terminal information.

1 15. (Canceled)

1 16. (Currently Amended) The computer-readable medium having computer-executable  
2 instructions for performing the method of claim ~~[[15]]~~ 13, wherein with a message used to transmit  
3 the user registration information to the terminal from the proxy server ~~[[is]]~~ being an error message.

1 17. (Currently Amended) The computer-readable medium having computer-executable  
2 instructions for performing the method of claim ~~[[15]]~~ 13, wherein the step of performing the  
3 registration of the terminal, and transmitting a registration success message comprises the sub-steps  
4 of:

5 ~~transmitting a received registration message to the location server, from~~ from ~~[[by]]~~ the ~~[[proxy]]~~  
6 session initiation protocol server receiving, from the terminal, ~~[[the]]~~ a registration message  
7 including the user registration information ~~from the terminal, the received registration message;~~  
8 comparatively analyzing the registration message by parsing the registration message,  
9 performing registration ~~[[if]]~~ when the registration message is successful, and transmitting to the  
10 session initiation protocol server, from the location server, a success message to the proxy server by  
11 the location server; and

12 transmitting the received success message from the session initiation protocol server to the  
13 terminal by the proxy server.

PATENT  
P56921

1 18. (Currently Amended) A computer-readable medium having stored thereon a data  
2 structure, comprising:

3 a first field containing data representing transmitting a transmission of a media access control  
4 address from a terminal to a session initiation protocol server by a terminal;

5 a second field containing data representing retrieving a retrieval of a database comprising  
6 terminal information [[of]] for the terminal in accordance with the media access control address, and  
7 transmitting a transmission, to the terminal, from the session initiation protocol server receiving the  
8 media access control address from the terminal, of the terminal information [[of]] for the terminal  
9 corresponding to the received media access control address to the terminal by the session initiation  
10 protocol server receiving the media access control address from the terminal;

11 a third field containing data representing transmitting a transmission, from the terminal to  
12 the session initiation protocol server, of a register message including comprising the obtained  
13 terminal information and designating a first predetermined value assigned to [[with]] a field value  
14 of a telephone number field to the session initiation protocol server by the terminal;

15 a fourth field containing data representing retrieving a retrieval of a database, and  
16 transmitting a transmission, to the terminal, from the session initiation protocol sever receiving, from  
17 the terminal, the register message comprising the terminal information and the first predetermined  
18 value assigned to the field value of the telephone field, of a second predetermined value of the  
19 telephone number field and user registration information in accordance with the terminal information  
20 received from the terminal to the terminal by the session initiation protocol sever receiving the  
21 register message including the terminal information and designating the first predetermined value  
22 with the field value of the telephone field from the terminal;

23 a fifth field containing data representing requesting a request, made by the terminal, for

PATENT  
P56921

24 requesting the session initiation protocol server to perform registration by using the received user  
25 registration information by the terminal; [[and]]

26 a sixth field containing data representing performing the registration of the terminal, and  
27 transmitting a transmission, to the terminal, from a registration success message to the terminal by  
28 the session initiation protocol server receiving, from the terminal, a registration request signal  
29 including the user registration information from the terminal, of a registration success message; and  
30 the fourth field further comprising:

31 a first sub-field containing data representing a parse of the  
32 register message, and a request made by the session initiation protocol  
33 server receiving, from the terminal, the register message including the  
34 terminal information and including the first predetermined value  
35 assigned to the field value of the telephone number field, for  
36 requesting a location server to transmit the user registration  
37 information in accordance with the terminal information;

38 a second sub-field containing data representing the retrieval  
39 of the database, and the transmission, to the proxy server, from the  
40 location server requested to transmit the user registration information  
41 from the proxy server, of the user registration information in  
42 accordance with the terminal information; and

43 a third sub-field containing data representing the transmission,  
44 to the terminal, from the proxy server receiving, from the location  
45 server, the user registration information, of the received user  
46 registration information.

PATENT  
P56921

1 19. (Currently Amended) The computer-readable medium having stored thereon the data  
2 structure of claim 18, wherein the second field comprises:

3 a ~~[[first]]~~ fourth sub-field containing data representing a transmission to the location server,  
4 from the session initiation protocol server receiving, from the terminal, the media access control  
5 address, of transmitting ~~[[the]]~~ a received media access control address to the location server by the  
6 proxy server receiving the media access control address from the terminal;

7 a second fifth sub-field containing data representing the retrieval of retrieving the database,  
8 and a transmission, to the session initiation protocol server, from the location server receiving the  
9 media access control address from the proxy server, of the transmitting terminal information in  
10 accordance with the received media access control address to the proxy server by the location server  
11 receiving the media access control address from the proxy server, and

12 a ~~[[third]]~~ sixth sub-field containing data representing the transmission, to the terminal, from  
13 the session initiation protocol server receiving the terminal information from the location server, of  
14 transmitting the received terminal information to the terminal by the proxy server receiving the  
15 terminal information from the location server.

1 20. (Canceled)

1 21. (Currently Amended) The computer-readable medium having stored thereon the data  
2 structure of claim ~~[[20]]~~ 18, wherein the sixth field comprises:

3 a ~~[[first]]~~ seventh sub-field containing data representing a transmission transmitting, to the  
4 location server, from the session initiation protocol server receiving, from the terminal, a registration

PATENT  
P56921

5 message including the user registration information, [[a]] of the received registration message to the  
6 location server by the proxy server receiving the registration message including the user registration  
7 information from the terminal; and

8 a second an eighth sub-field containing data representing a comparative[[ly]] analysis of  
9 analyzing the registration message by parsing the registration message, performing registration [[if]]  
10 when the registration message is successful, and transmitting a success message to the [[proxy]]  
11 session initiation protocol server by the location server.

1 22. (Currently Amended) The computer-readable medium having stored thereon the data  
2 structure of claim 21, wherein the sixth field further comprises:

3 a [[third]] ninth sub-field containing data representing a transmission of transmitting the  
4 received success message from the session initiation protocol server to the terminal by the proxy  
5 server.

1 23. (Currently Amended) A voice over Internet protocol system, comprising:  
2 a session initiation protocol server; and  
3 a terminal transmitting a media access control address to the session initiation protocol  
4 server,

5 with the session initiation protocol server retrieving a database comprising terminal  
6 information [[of]] for the terminal in accordance with the media access control address, and the  
7 session initiation protocol server transmitting, to the terminal, the terminal information [[of]] for the  
8 terminal corresponding to the received media access control address to the terminal,

9 with the terminal transmitting a register message including the obtained terminal information

PATENT  
P56921

10 and ~~designating~~ a first predetermined value assigned to ~~[[with]]~~ a field value of a telephone number  
11 field to the session initiation protocol server,

12 with the session initiation protocol server retrieving the database, and the session initiation  
13 protocol server transmitting to the terminal, a second predetermined value of the telephone number  
14 field and user registration information in accordance with the terminal information received from  
15 the terminal ~~to the terminal and designating the first predetermined value with the field value of the~~  
16 ~~telephone number field from the terminal~~,

17 with the terminal requesting the session initiation protocol server to perform registration by  
18 using the received user registration information, and

19 with the session initiation protocol server performing the registration of the terminal and  
20 transmitting a registration success message to the terminal.

1 24. (Original) The system of claim 23, wherein the terminal information includes Internet  
2 protocol address, Subnet, and domain name server information of the terminal.

25. (Canceled)

1 26. (Original) The system of claim 25, wherein the first predetermined value transmitted to  
2 the session initiation protocol server from the terminal in the step of transmitting the register  
1 message is an unused telephone number.

1 27. (Currently Amended) A method, comprising:

2 obtaining ~~[[a]]~~ terminal information, with the step of obtaining the terminal information

PATENT  
P56921

3 performed by:

4 obtaining a certain set of information ~~[[of]]~~ for a terminal and  
5 a server by using a media access control address;

6 ~~transmitting to a proxy server, the media control address by~~  
7 ~~from~~ the terminal and at least one of a plurality of access points, the  
8 media control address ~~to a proxy server;~~

9 requesting by the proxy server ~~[[to]]~~ for a location server to  
10 transmit terminal information in accordance with ~~[[the]]~~ a received  
11 media access control address;

12 ~~transmitting to the terminal, [[by]]~~ from the location server,  
13 ~~to the terminal of~~ certain information retrieved from a database of the  
14 terminal in accordance with the media access control address, and  
15 ~~[[with]]~~ the database comprising the terminal information ~~[[of]]~~ for  
16 the terminal in accordance with the media access control address; and

17 ~~transmitting to the access points, the certain information~~  
18 ~~retrieved from the database of the terminal to the access points, and~~  
19 ~~the access points transmitting, to the terminal, the certain information~~  
20 ~~[[of]]~~ for the terminal and ~~[[a]]~~ certain information ~~[[of]]~~ for the  
21 access point ~~to the terminal;~~

22 obtaining a first telephone number, with the obtaining of the first telephone number

23 performed by:

24 when the terminal receives the terminal information,  
25 retransmitting the received terminal information to the proxy server

PATENT  
P56921

26 through the access points ~~when the terminal receives the terminal~~  
27 ~~information;~~  
28 setting the first telephone number to a predetermined unused  
29 telephone number;  
30 considering, by the proxy server, ~~[[the]]~~ authentication of the  
31 first telephone number transmitted from the terminal ~~by the proxy~~  
32 ~~server~~ by the setting of the first telephone number to the  
33 predetermined unused telephone number;  
34 requesting by the proxy server, the location server to transmit  
35 a second telephone number and registration information ~~[[of]]~~ for the  
36 corresponding terminal by transmitting the received terminal  
37 information to the location server;  
38 transmitting to the proxy server, by the location server, the  
39 second telephone number and the registration information ~~[[of]]~~ for  
40 the corresponding terminal ~~to the proxy server~~ by retrieving a  
41 database;  
42 transmitting the received second telephone number and the  
43 registration information to the access point; and  
44 transmitting to the terminal, ~~[[by]]~~ from the access point the  
45 second telephone number and the registration information ~~[[of]]~~ for  
46 the terminal ~~to the terminal~~ by inputting information obtained within  
47 an error message; and  
48 registering the terminal.

PATENT  
P56921

49           28. (Currently Amended) The method of claim 27, with the registering of the terminal,  
50 comprising:

51           receiving by the terminal, the second telephone number and the registration information from  
52 the proxy server performing a registration process after setting new values, with the terminal  
53 encoding the received second telephone number and the registration information to a predetermined  
54 format;

55           transmitting, to the access point, the second telephone number and the registration  
56 information ~~to the access point~~ by using a register method;

57           sending by the access point, the second telephone number and the registration information  
58 to the proxy server;

59           receiving by the proxy server, a register message from the terminal, comparing the register  
60 message, and when the register message is successful, the proxy server transmitting the register  
61 message to the location server, to perform registration; and

62           transmitting, by the location server, a predetermined successful message after performing the  
63 registration, and when any problem is generated, the location server transmitting a predetermined  
64 error message, and informing of a reason for the error message.

1           29. (Original) The method of claim 28, wherein the terminal information includes Internet  
2 protocol address, Subnet, and domain name server information of the terminal.

30. (Canceled)

1           31. (Currently Amended) The method of claim 27, with the registering of the terminal,

PATENT  
P56921

2 comprising:

3 receiving by the terminal, the second telephone number and the registration information from  
4 the proxy server performing a registration process after setting new values, with the terminal  
5 encoding the received telephone number and the registration information to a predetermined format;

6 transmitting, to the access point, the second telephone number and the registration  
7 information ~~to the access point~~ by using a register method;

8 sending by the access point, the second telephone number and the registration information  
9 to the proxy server;

10 receiving by the proxy server, a register message from the terminal comparing the register  
11 message, and when the register message is successful, the proxy server transmitting the register  
12 message to the location server, to perform registration; and

13 transmitting, by the location server, a predetermined message informing of a status after  
14 performing the registration .
